SUMMARY

U.S. Marine Corps veteran and former KMI Custodian studying cybersecurity, shipping full-stack AI apps with AI-assisted development from architecture to deployment. Two-time 1st-place hackathon winner seeking a security or software internship.

EDUCATION

Temple University, Japan Campus — Tokyo, Japan
B.S. Cybersecurity — Sep 2025 – Expected 2029
Completed Coursework: Python Programming, C Programming, Object-Oriented Programming (Java), Discrete Mathematics

EXPERIENCE

United States Marine Corps — Okinawa, Japan & Camp Lejeune, NC
Corporal (E-4), Field Artillery Radar Operator (MOS 0842) & KMI Custodian — Jul 2021 – Jun 2025

- Safeguarded, loaded, and accounted for COMSEC key material on AN/PRC-117G and AN/PRC-152 radios as KMI Custodian.
- Operated and maintained three radar systems (AN/TPS-80 G/ATOR, AN/TPQ-48, AN/TPQ-46) over three years of fleet operations, helping track thousands of artillery munitions and relaying real-time battlefield intelligence to commanders.
- Earned Combat Marksmanship Coach and Trainer qualifications through two formal schools and trained unit personnel.

Volunteer Web Developer, Kady's English Classes (kadysenglish.com) — Jan 2026 – Present

- Gathered requirements from a freelance English teacher and delivered a business website with services and contact sections.
- Maintained the site after launch, revising design and content based on ongoing client feedback.

PROJECTS

FocusHear | *Supabase*, *Stripe*, *OpenAI API*, *ElevenLabs API*, *Vercel* — Jun 2026 – Present

- Co-founder and lead engineer on a 4-person team; built a real-time captioning app for people with hearing loss in 48 hours, with selective listening, speaker diarization, and ASL fingerspelling (1st place).
- Rebuilt with Supabase Auth, Stripe, and GPT-4o; defined row-level security rules to keep each user's voice and face data private.

NóiFlow AI (Founder & Sole Engineer) | *Supabase*, *Gemini API*, *Vercel* — Jun 2026 – Present

- Building an AI workspace for English classes in Vietnam that turns vocabulary into flashcards, readings, and speaking prompts.
- Teachers review every AI-generated draft before students see it; analytics surface each class's weakest words.

AEGIS Threat Dashboard | *Cloudflare Workers* — Sep 2026

- Deployed a live SOC-style dashboard mapping five public threat-intelligence feeds, including CISA's KEV catalog, onto a 3D globe.
- Cached every feed through a Cloudflare Worker refreshed every 5 minutes to respect upstream rate limits.

AI Wargame | *Python*, *Neo4j*, *LLM APIs* — Oct 2026

- Built solo at the Tokyo Agent Hackathon: DeepSeek and Kimi agents attack and defend a simulated network modeled in Neo4j.
- Ran 100 seeded matches to tune game balance before the demo.

G2 Smart Glasses Translator | *OpenAI Realtime API*, *Cloudflare Workers* — Aug 2026

- Built live Vietnamese-to-English translation for G2 smart glasses, displaying English about one second behind the speaker.
- Built a Cloudflare Worker relay that keeps the OpenAI key server-side and rejects clients without a shared relay secret.

AWARDS

1st Place, SDGs to Startups Hackathon 2026, Shibaura Institute of Technology — Jun 2026
1st Place, UI/UX Hackathon, Temple University Japan — Mar 2026
Selected, Build with OpenAI (invite-only), OpenAI × Tokyo AI — Jun 2026
Navy and Marine Corps Achievement Medal — 2024

LEADERSHIP & WRITING

Founder & Lead, Cybersecurity Newsletter Club, Temple University Japan — 2026 – Present
Author, four articles on cybersecurity, privacy, and AI, carlmasters.com — 2026

SKILLS

Languages: Python, C, Java
Backend & Data: Supabase (Auth, Database, Row-Level Security), Neo4j
Integrations: OpenAI API, Anthropic API, Gemini API, ai& API, ElevenLabs API, Stripe
AI-Assisted Development: OpenCode, Claude Code, Codex, Cursor
Deployment & Version Control: Vercel, Cloudflare Workers, Git, GitHub
Operating Systems: Linux (Fedora, Kali, Whonix, Tails), command line
Virtualization: virt-manager
Security: COMSEC / KMI, Operational Security (OPSEC)
Spoken Languages: English (Native), Japanese (Beginner)
